

Workplan: Project Gantt Chart

The workplan comprises 5 work packages, of which **WP5** (Supply Chain and legal acceptability) is the starting point, through which we start to elicit early requirements from a range of stakeholders aiming to establish connections between what stakeholders (rights holders, legal experts, individuals) seek in terms of functionality and what technology can deliver. For the latter, at the same time **WP1** (Cryptography) and **WP2** (Security policy modelling and tools) are spreading and deepening the team's knowledge of the state of the art in blockchain technology (including dialogue with the companies associated with DC and HEMM who are actively exploring its application) and policy reasoning (Bath and Bristol). This first phase (Q1) sees the recruitment of RAs for **WP1** and **WP2**. The RA for **WP3** will be recruited in Q6 (see workplan). The RAs for **WP4** (Models of Trust) can be subcontracted flexibly/part-time from Bath IMI as and when needed. The core of the work programme rests on three activities: (i) research on technical aspects (**WP1**, **WP2**, **WP3**) (ii) research on technical and human aspects of deployment (**WP3**, **WP5**) (iii) research on human (individual and societal) aspects of uptake (**WP4**, **WP5**).
